

REMOTE EXPERT SUPPORT FOR FARMING

Technology

Real-time remote support for farms can help reduce machinery downtime and costs. Farmers can use a 5G-enabled hands-free VR headset with a live camera to show experts the maintenance or training issue with their robotic milking unit and other operational machines. Remote technicians provide step-by-step guidance, diagnosing and resolving problems without travel delays. The technology could easily be applied to other applications e.g. other specialist machinery / vehicles or even vet diagnosis.

The Need for Farmers

- › Farmers depend on in-person visits to fix robotic milking stations
- › Equipment downtime disrupts milk production and increases costs
- › New operators may struggle without expert guidance

Benefits

Why Rural Connectivity Matters?

Reliable 5G is a game-changer - bringing instant expert support to remote farms, cutting downtime and eliminating costly delays.
